

Technical Workshop Cheat Sheet

1. Opened a Google account - apitrialacc@gmail.com
2. Go to <https://console.cloud.google.com/>
3. Go to "Select a Project" menu
4. Click on new project
5. Name your project as **google-api-trial**
6. Go back to the dropdown menu and select that project
7. Go to Navigation menu -> APIs & Services -> OAuth Consent Screen
8. Click on External and click on Create
9. Name your app
10. Select your email from dropdown
11. We can either provide the scopes in the script or on the UI. I would better keep them for script.
12. Then we need to enable needed APIs. To do that, we go to APIs & Services -> Library
13. After searching and enabling APIs, now it's time to download the OAuth credentials.
14. Go to APIs & Services
15. Then click on Create Credentials -> OAuth Client ID -> Web Application -> name it with your first name and last name first letters concatenated -> Create
16. Then you can download the OAuth key.
